ADALINE POWELL

Milwaukee, Wisconsin | adalinebrynnpowell@gmail.com | (920) 843-7375 | LinkedIn | Portfolio | GitHub

EDUCATION

Master of Science, Data Science and Applied AI *Expected Dec. 2026*
University of Wisconsin–Milwaukee

Master of Arts, Political Science *2025*
University of Wisconsin–Milwaukee

Bachelor of Arts, Political Science (Pre-Law) *2023*
University of Wisconsin–Milwaukee

Bachelor of Arts, Philosophy *2023*
University of Wisconsin–Milwaukee

WORK EXPERIENCE

Research Analyst *May 2026 – Present*
Wisconsin Women's Council · WWC Status of Women Dashboard

- Designed a county-level dashboard on the status of women in Wisconsin — demographics, earnings, economic security, health, and domestic violence across all 72 counties — creating a single view where the data had been siloed across four government sources.
- Architected a star schema with a shared geography dimension
- Built Python ingestion pipelines for Census ACS 5-year API data (~75,000 rows), FBI NIBRS domestic violence incident data, and Wisconsin DHS WISH birth records.

Research & Insights Project Lead (Intern) *2026 – Present*
Milwaukee Women Inc · 2026 Research Report

- Automated a manual process of scraping SEC filings by building a web scraper to pull board information from public sources, and added validation checks that cross-reference two additional SEC forms.
- Evaluated the efficiency of MiW's current verification process through an analysis of errors, concluding the verification step was necessary.

Research Assistant (Project-Based) *2024 – Present*
Argosy Foundation · Grant & Nonprofit Research

- Built a rank analysis to narrow candidate grants to finalists, scoring each organization on a set of variables and ordering the results.
- Foundations Navigating Uncertainty: Applied NLP and topic modeling to philanthropic foundations' public statements, surfacing themes in how organizations respond to economic instability and budget cuts.
- Nonprofit Financial Practices Analysis (2024): Modeled how nonprofit savings levels affect grant eligibility and simulated funding scenarios to inform grant-making recommendations.

Data Analytics Intern *June – Sept. 2026*
Delta Defense, LLC · West Bend, WI

- Rotational internship spanning three teams: Advanced Analytics, Data Engineering, and Ingestion, providing cross-functional exposure to the data lifecycle.
- Advanced Analytics (Data Science): Built an attendee-focused event benchmarking and predictive pipeline for USCCA events — registrant-level attendance forecasting, a Reported-vs-system-check-in discrepancy model, and a lead-to-membership conversion model — trained on an 800K+ row dataset in close collaboration with AI coding tools.
- Data Engineering: Gained hands-on exposure to dbt and a staging-to-vault pipeline architecture, writing SQL to rebuild Hub and Link tables that feed downstream fact and dimension marts.

PROJECTS

UWM Finance AI Forecast Assist *Oct. 2026 – Present*

- Helping build a salary forecasting tool for the UWM Finance Department that produces rolling forecasts by organizational level, with a Power BI or AI-assisted tool as the intended output.

UWM Track & Field Analytics Platform *Spring 2026*

Python, Flask, SQLite, scikit-learn, XGBoost, Plotly

- Vibecoded a full-stack, role-based analytics platform centralizing athlete competition, testing, and practice data and predicting season PRs — replacing three disconnected sources (TFRRS, coach spreadsheets, paper logs) that made connecting training indicators to outcomes impossible.
- Implemented the platform in Flask/SQLite with Flask-Login role guards, a requests/BeautifulSoup scraper automating TFRRS collection, per-event Random Forest and XGBoost models (scikit-learn, joblib), and interactive Plotly dashboards.
- Unified TFRRS competition history for ~154 UWM athletes with six seasons of multi-format Excel fall-testing data and coach-provided practice logs into a six-table relational schema.

TECHNICAL SKILLS

Data Engineering & Platforms: ELT Pipelines, Streaming Data, Real-Time Analytics, SQL, Snowflake, dbt, Databricks, Microsoft Fabric, Azure IoT Hub, KQL, PySpark, ArcGIS

Data Science & Modeling: Machine Learning, NLP & Topic Modeling, Regression (Logistic, Negative Binomial), Predictive Modeling, Feature Engineering, Cross-Validation, Random Forests, XGBoost, Neural Networks

BI & Analytics: Power BI, Tableau, Sigma, Streamlit

Agentic AI Development: Anthropic SDK/API, Multi-Agent System Design, Prompt Engineering, Claude (VS Code / Claude Code), COCO

Programming & Tools: Python (pandas, scikit-learn, Flask, BeautifulSoup), R, SQL, SPSS, Qualtrics

Certificates: Quantitative Social Data Analysis

EXTRACURRICULARS

Northwestern Mutual Data Science Institute

Women's Track and Field

Northwestern Mutual Data Science Institute Center of Excellence Scholarship Recipient (2x)
